

## Organometallic Bonding and Reactivity

Filesize: 6.58 MB

### ***Reviews***

*A must buy book if you need to adding benefit. I have read through and i also am certain that i will likely to read through once again yet again in the future. Its been designed in an exceedingly simple way and is particularly merely after i finished reading this publication by which really modified me, modify the way i think.*

## ORGANOMETALLIC BONDING AND REACTIVITY

Springer Okt 2013, 2013. Taschenbuch. Book Condition: Neu. 235x155x11 mm. This item is printed on demand - Print on Demand Neuware - General The making and breaking of carbon-metal bonds is fundamental to all the processes of organometallic chemistry and moreover plays a significant role in homogeneous as well as heterogeneous catalysis. This rather blunt statement emphasises the extent to which a proper understanding of the structure, energetics and reactivity of C-M bonds is at the core of the discipline. In order to accept it, a proper definition of the terms involved is required. Quite simply we define the metal-carbon bond in its broadest sense to embrace carbon linked to transition metals, lanthanides and actinides, and main group metals. We do not distinguish between formally covalent single or multiple bonding on the one hand and  $\eta$ -bonding on the other. In the studies to be described in the following chapters, the emphasis will be on transition metal complexes and insofar as the fundamentals come under scrutiny, simple metal alkyls or related species (metal alkyl, alkynyl, aryl, or allyl) will play an emphatic part. The central role of metal alkyls and their congeners and especially the role of their metal carbon linkage in homogeneous catalysis may be appreciated by considering some key reaction steps leading to their formation or breakdown. There follows a few prominent examples of transition metal mediated stoichiometric or catalytic processes: - In homogeneous hydrogenation of double bonds, the stepwise reaction of an  $\eta^2$ -coordinated alkene with dihydrogen gives first an alkyl metal hydride, and then the decoordinated alkane by elimination. 216 pp. Englisch.
